TITLE INDEX

Analysis of production lines with general service times and finite buffers: A two-node decomposition approach, 155
Applying the principles of optimized production technology in a small manufacturing company, 79
Capacity planning of diagnosis systems in hospitals, 205
Case study of production scheduling in a chemical industry, a, 35
Combination of creative vision with quantitative evaluation of alternative strategies as a key success factor in production economics, the, 303
Computerization of manufacturing planning and control systems: Minicomputer-based systems 1980–1987, 71
Computer-based multi-attribute simulation of production and financial strategies, 331
Criteria for asset replacement studies, 271
Decision support system for planning chemical production of active ingredients in a pharmaceutical company, a, 377
Demand forecasting for parts used in modular products: A case study, 231
Deposit planning framework at the banking system level in India, a, 277
Developing computer integrated manufacturing: Major issues and problem areas, 197
Dynamics of capacity planning for flexible manufacturing system startup, the, 55
Evolving coordination schemes in real-time production scheduling, 111
FINSIM expert; A KB/DSS for financial analysis and planning, 359
Forecasting methods for CIM technologies, 323
Generalizing the price-break EOQ problem, 183
Geometric search theory and demand uncertainty, 245
Intelligent simulation environment for production/distribution systems, an, 351
JIT applications to warehousing operations, 315
Lot-sizing and flow production in an MRP-environment, 65
Measuring logistics performance, 253
Multi-item production control for production to order, 167
Ordering and stockholding under price inflation when prices increase in successive discreta jumps, 395
Planning and scheduling in an FMS, 89
Productivity nexus of new inventory and quality control techniques, the, 21
Properties of the sequential Markovian allocation problem, some, 175
Rationing safety stock in the USAF's multi-echelon inventory system, 99
Robot location for minimum cycle time, 29
Queueing models of Kanban and MRP controlled production systems, 3
Service levels in single-stage MRP systems with demand uncertainty, 125
Short term forecasting DSS for improving the sales/manufacturing linkage, a, 369
Simulation of the procurement of an avionic logistic system, the, 343
Single quantity-discount problem under ROI maximization, the, 263
Strategic management of manufacturing technology, the, 293
Study on the manufacturing planning and control in a beef cutting plant of a Swedish company, a, 43
Successive approximations procedures for a cellular manufacturing problem with machine loading constraints, 135
Supply decisions for unknown linearly increasing demand, 389
Survey of robotics in the health care industry, 223
Using timed Petri nets for the scheduling of job-shop systems, 149
